1. Introduction

Daily TAQ (Trade And Quote) is a set of files that contain all trades and quotes for all issues listed and traded on US regulated exchanges for a single trading day. The Daily TAQ data is derived from the output of the CTA and UTP SIPs, tapes A, B, and C.

The SIP data is published between 4:00am-8:00pm every trading day.

The NYSE Daily TAQ archive goes back for many years, and both current and historical data are available for download.

You can obtain a license to access specified months of historical data, or a license for ongoing access to the current Daily TAQ files (the last five days' files). Available transfer methods are FTP and SFTP.

For details, contact DataSales@theice.com

1.1 FILE CONTENT

One day's set of Daily TAQ files includes:

DAILY TAQ FILE	CONTENT
Master File	Master information for all symbols published by CTA and UTP
Trades File	All trades published by CTS and UTDF
Quotes (26 files)	All quotes published by CQS and UQDF (records are grouped into files alphabetically by symbol)
NBBO File	All National Best Bid and Offer updates published by CQS and UQDF
Quote LULD File	All Limit-up/Limit-down Price Band messages published by CQS and UQDF
Trade LULD File	All Limit-up/Limit-down Price Band messages published by CTS and UTDF
CTA Admin File	All administrative messages published by CTA
UTP Admin File	All administrative messages published by UTP

1.1.1 Typical File Sizes and Availability

Daily TAQ files are created and become available after the close of US equities markets on the same day.

Guidelines on typical file size and availability are shown in the chart below. File sizes, number of rows, and availability times shown below are estimates based on recent trading volumes. History availability dates are exact.

All times are in US Eastern time.

1.1.2 Availability Notifications

If today's Daily TAQ files are delayed beyond its deadline for whatever reason, a notice will be published to customers no later than 2am.

To register to receive product news and/or operational status notifications for all proprietary data products, visit <https://www.nyse.com/subscriptions>.

1.2 FILE DELIVERY

The current Daily TAQ files, those containing data from the most recent 5 days, are accessed by logging into the NYSE Managed File Transfer infrastructure, or MFT, and downloading the files that interest you via SFTP.

Daily TAQ files from all earlier dates are accessed by logging into the NYSE FTP site and downloading any of the files to which you are entitled via FTP or SFTP.

All Daily TAQ files are compressed using gzip.

1.2.1 NYSE MFT Directory Structure

Using the NYSE Managed File Transfer infrastructure, the last 5 days worth's of Daily TAQ files are accessible as follows:

Point your browser to <https://mftus.nyx.com> and log in with your credentials. Click /DAILYTAQ, then navigate to the desired path below.

1.3 FILE FORMAT

Every Daily TAQ file

- Is in ASCII format
- Is compressed using gzip.
- Starts with a Header Record and ends with a Trailer Record:
 - The Header Record is a pipe-delimited list of the names of all the fields in the data records in this file.
 - The Trailer Record has the same number of pipe-delimited fields as this file's data records:
 - Field 1 The word "END", without quotation marks
 - Field 2 An 8-character date (YYYYMMDD)
 - Field 3 The number of records in this file, not counting the header and trailer
 - Fields 4 to the end are blank (empty)

Every record in a file between the Header and Trailer records

- Represents a single event published by CTA and UTP
- Consists of a sequence of pipe-delimited ASCII fields specified in this document
- Is terminated by a newline character ('\n')

1.4 FIELD FORMATS

1.4.1 Symbols

Symbols are expressed in NYSE Symbolology, which consists of

Root (6 chars maximum), space, and Suffix (10 chars maximum)

See the [NYSE Symbolology Specification](#) for details.

The Master File also includes the symbols in the original formats published by the SIPs. For CTA symbols, see [CTS Binary Output Spec](#) Appendix B. For UTP symbols, see [Nasdaq 5th Character Suffix List](#).

Test Symbols are included in the Daily TAQ files.

1.4.2 Prices

Every price field represents a dollar amounts with an optional fractional component. A price consists of up to 14 ASCII numeric characters of whole value (with no leading zeroes), an optional decimal point ('.'), and up to 6 ASCII numeric characters of fraction (with no trailing zeroes). The whole field can be a maximum of 21 characters.

1.4.3 Sequence Numbers

For Tape C symbols (published by the UTP SIP), Daily TAQ sequence numbers are typical message sequence numbers as they appear in the UTP feeds, incrementing by 1 with every message.

For Tape A and B symbols (published by the CTA SIP), sequence numbers are derived from two different CTA fields: Block Sequence Number (appearing in the Block Header) and Message ID (appearing in the Message Header). For this reason, sequence numbers for Tape A and B symbols do not increase continuously. The formula for the Daily TAQ Sequence Number is:

Daily TAQ Sequence Number =

$$(CTA\ Block\ Sequence\ Number * 100) + CTA\ Message\ ID$$

	Example 1	Example 2	Example 3
CTA block seq num	1	24	4,567
Message ID	3	39	5
Daily TAQ sequence number	103	2,439	456,705

1.4.4 Timestamps

Current timestamps are a fixed length field of ASCII numeric characters in the following format:

HHMMSSxxxxxxxxxx

HHMMSS represents 2-digit values for hours, minutes and seconds since midnight, and the 9 x's represent a nine digit nanosecond value.

Timestamp History

The accuracy of timestamps published by the SIPs has improved in steps over time, with CTA and UTP on different schedules from each other. Timestamps in Historical Daily TAQ reflect this evolution. For consumers of historical Daily TAQ, here is the dated change list for SIP timestamps.

Timestamps are durations since midnight, eg: seconds since midnight, nanoseconds since midnight

DATE OF CHANGE	UTP CHANGES	CTA CHANGES
January 1993	seconds HHMMSS	seconds HHMMSS
October 2003	milliseconds HHMMSSxxx	milliseconds HHMMSSxxx
July 27, 2015	microseconds HHMMSSxxxxxx	
August 3, 2015		microseconds HHMMSSxxxxxx
October 24, 2016	nanoseconds HHMMSSxxxxxxxxxx	microseconds HHMMSSxxxxxx000
September 18, 2017		nanoseconds HHMMSSxxxxxxxxxx

1.4.5 Blank Fields vs. Space Characters

When a field has no meaningful content, it is generally left blank, meaning there are no characters between the delimiting pipe characters. Occasionally a field has a set of SIP-defined values which includes a space character as a valid value, usually meaning not applicable or normal. In this case, the field will contain a space character (ASCII 0x20) between the delimiting pipe characters.

Blank	
Space	

1.4.6 Fields from One SIP Only

Certain fields contain data that is only published by one of the two SIPs: ie, published by CTA and not by UTP, or vice-versa. In these cases, the description of the field is marked CTA or UTP as appropriate. Unless otherwise specified, such a field will be blank for records originating with the other SIP.

1.5 ABBREVIATIONS USED IN THIS DOCUMENT

TERM	MEANING
BBO	Best Bid and Offer
LULD	Limit Up – Limit Down
MWCB	Market-Wide Circuit Breaker
NBB	National Best Bid
NBO	National Best Offer
NBBO	National Best Bid and Offer

2. Daily TAQ Master File

The Daily TAQ Master file contains static security information for all stocks traded by participants of CTA and UTP.

Test Symbols are included.

The Daily TAQ Master File is sorted by symbol.
